Simulation patient education in ethics 1 ECTS

Task: Video simulation and reflection

Updated by EthCo-team 25.8.2025

Contents in this Course

▷   Welcome words and get to know each participants

▷   Introduction of the Course

NOTE! You should have been as a participant in simulation before this course

▷   **Ethical situation in multiprofessional team, Moral Distress, Ethical safety**

Lesson 1 Simulation as a learning/teaching pedagogy; Simulated Patient as a concept

Lesson 2 Case based acting, Patient experience and some practical task

Case Based acting -Communication (verbal/nonverbal)

Emotions, voices

Lesson 3 Giving relevant feedback to students after simulation

Task   Video simulation and reflection

Simulations

- The use of simulation for technical skills is very well researched and adopted in healthcare professional training.

- However, simulation in non-technical and transferable skills is still developing, especially simulation as a pedagogy in learning ethics.

- During the EthCo project we planned and piloted multiprofessional simulation scenarios with ethical themes in nursing or physiotherapy environment in an acute healthcare context.

- We prepared virtual simulations and face to face simulations.

For Better Ethical Safety

Instructions

Check these simulation videos carefully

A. alone AND B. with other participants based on instructions from the teacher.

[ETHCo - Pat on the back? No, thanks](#)

▷ After that reflect on this: What happened in the situation? (in general)

▷ The situation was ethically challenging. What competing values / ethical principles were in conflict?

▷ If you experience a similar situation, what would you do as a professional physiotherapist or nurse?

▷ Return your reflection to teacher
